

EVOLUTION WORKSHEET

Student Name: _____ Hr: _____

Your Topic: _____

Team Member's Names:
(First and Last Names)

Objective: As creative problem solvers, we must find new ways to change an idea to make it better. This constant evolution of an idea only makes it stronger and allows us to find a better solution for a need.

Directions: Use this worksheet to note ideas that worked in other designs and how they may be used to evolve your design.

1. INTRODUCTION: The beginning of a presentation is crucial. You need to grab your audience's attention and hold it.

- What did you notice that worked or did not work well?

- What will you do to evolve your opening?

2. Speech Pacing and Voice Volume: Taking breaths and pauses are important for the audience to follow what is being said and hearing what is needed.

- What did you notice that worked or did not work well?

- What will you do to evolve your speech pacing and voice volume?

3. Body Position: How someone stands, sits, the distance between and interaction with others can create a sense of “atmosphere” in a presentation. Being aware of how that might look to the audience is important.

- What did you notice that worked or did not work well?

- What will you do to improve your spacial awareness?

4. MESSAGE: What was done to make the message/theme clearly understood?

- What did you notice that worked or did not work well?

- What will you do to evolve your message?

5. CLOSING STATEMENT: The way a presentation ends is just as important as the way it began. How will the audience know when it is finished? How is the main topic/idea/or need referenced?

- What did you notice that worked or did not work well?

- What will you do to evolve your closing statement?
